

Dear EGCSA Member:

I am an entomologist and received my degrees from the University of Florida. I am collecting yellowjacket wasps (*Vespula squamosa*) and removing their nests. The wasps will be used for genetic research and for the making of desensitization shots. I am thus trying to locate problem yellowjacket wasp nests throughout the state of Florida that I can remove. I do not charge for providing this service.

You can find additional information about me by going to my website at [www.felinepress.com](http://www.felinepress.com). You may also obtain a personal reference from Prof. Howard Frank in the Dept. of Entomology & Nematology at the U. of Florida.

Thank you very much for your time and consideration.

Sincerely,

Dr. James L. Castner
